

Jackson County Water is raising the cost of a water service. A routine $\frac{3}{4}$ " water service will be \$2500.00 as of October 1. The increase in material costs as well as other costs have forced us to increase the cost of a new service. This fee is the same for a meter on the same side of the road as the main, or one requiring a bore from the other side of the road, as long as it is within the minimum footage.
